Assignment 1: Create and Submit Your Algorand Project Repository

Objective

Create a new GitHub repository where you will build and maintain your Algorand project throughout this course.

Instructions

1. Create a new public repository on GitHub.
2. Name the repository appropriately, related to your Algorand project idea.
3. Add a clear README.md.
4. Make your first meaningful commit, not just an empty repository.

Important Notes

- The repository must be original, not a fork.
- Avoid unnecessary or repetitive commits.
- Ensure this repository will be used consistently for your Algorand project development.

Submission Requirement

Submit:

- GitHub Repository Link (public repository)
